

## **The Ultimate Horizon for the Blue Planet**

Whether it is Detroit, Geneva, Paris or Frankfurt, the spotlight is on alternative fuel technologies to aid the world in reducing its dependence on traditional fuels. Ethanol, bio based diesel, solar power, electricity, hybrid fueled and various converters that provide you a choice at the fuel pump, are all in the race to change the automobile industry's perception of the future.

*The only live supercar show in the world*, Top Marques Monaco, has as its raison d'être to bring you the greatest luxury and supercars in the world, all synonymous with excellence, quality and craftsmanship. Our April 2008 edition will prove to you that our manufacturers also head the vanguard of innovations to protect the environment. Not only do we have new hybrid and alternative fuel cars, but some of our classic beauties have entered the adventure of doing their bit to turn the blue planet green. Koenigsegg and Fisker, among others, have now added bio-fuel cars to their production. Let's face it: reducing CO<sup>2</sup> emissions in the environment now, while the cars roam the planet, definitely puts us in the right gear for the ultimate horizon for the automobile industry... space!

Top Marques Monaco would like to present you some of the new superstars that will headline our fifth edition in April 2008:

### **CONCEPT CLIMAX – UK**

The Concept Climax is the brainchild of two graduates who studied Automotive Design at Coventry University and formed Concept Climax Ltd during their studies. They have created a two-seater sports car that can run on ethanol fuel and offers performance figures similar to other super cars.

“We wish to bring Coventry back into the automotive limelight by reinventing the British Sports Car,” says Concept Climax M.D Simon Long. “Inspiration for the design came from the legendary Cooper Climax F1 car of the 50’s...” The car is all about the driving experience – the deliberately designed out roof evokes memories of classic Le Mans type race cars, complete with flip up aero – screens and a Climax Control that can boost the cars performance whilst driving. The Climax is mainly constructed from Aluminium by very skilled panel beaters who form the exterior by hand with great attention to detail.

### **BEBI Quercianella - Sweden**

The BEBI Quercianella leads the new generation of green super cars where lightweight is the buzzword. A supercharged and very light gasoline or ethanol powered 500 Hp V8 makes the 650 kg carbon fibre design a true and single-minded instrument for advanced driving. An extremely rigid carbon fibre monocoque makes sure that the BEBI/Öhlins pushrod suspension will perform at its best. Performance is wild, but the lightweight concept, aerodynamics and non compromise chassis design makes sure you can use it without being a fully trained racing driver. The name Quercianella is a tribute to the genius and father of the Ferrari 250 GTO, engineer Giotto Bizzarrini, who designed the basic BEBI chassis concept. Quercianella is the Tuscan village where he once grew up.

### **HYBRID TECHNOLOGIES - USA** **LIX-75 GT**

Hand built carbon fibre supercar, ready to change the way the world looks at electric power. Hybrid Technologies has created a platform aimed at surpassing current electric sports cars with the use of a highly advanced battery management system, along with a proprietary battery balancing system. The LIX-75 GT incorporates safety elements that are presently incorporated into Hybrid's consumer products such as the New York City Taxi and the NASA Smart Car used at Kennedy Space Center.

The LIX-75 GT has a equivalent horse power rating of 600 hp and a 0-60 in 3.2 seconds ( \* on track pre-order testing) The vehicle has a complete electric drive system and can be appointed in a series of interiors styles from a race mockup to a luxury version. Hybrid will be releasing the most advanced electric vehicle on the market, the \$600,000 USD named the "X" '

## LINX

M2Linx Design is a new European car manufacturer that presents worldwide a new concept of the luxurious super car LINX. With the goal to offer a few privileged individuals a unique and exclusive vehicle, with features rivaling the best in the world, M2Linx Design S.L. used the most state of the art engineering on the LINX, both in the design of each of its components as well as in the manufacturing process, resulting in a masterpiece of exquisite style. The best feature is its weight to power ratio. With a 380CV engine, aluminum chassis and carbon fiber body totaling only 650kg, it offers a ratio of 1.7 kgCV, far surpassing many current supercars with a 0 to 100 km acceleration of less than 3 seconds. The LINX is a unique piece of art, a revolutionary concept, much more than just a limited edition car. It is a car with features that will set trends. The Linx presents the Triple P invitation: Pleasure, Passion, and Precision = LINX...

### **Pagani's Zonda R – Italy – True to excellence and perfection**

Pagani's Zonda R is born with full liberty. The target: the ultimate performance at the racetrack. The engine is the incredible Mercedes-AMG with a power output of 750hp, dry sump, light and with a low centre of gravity. The R has suspensions forged in Avional, a new Pagani six-speed transversal sequential gearbox, a carbon fibre monocoque, an aeronautical four-pump fuel tank, all of which are only part of the equation. Even though built for the track, the quality and finish of the car and its details are exactly the same of Pagani road cars: absolutely exclusive.

*Earth-Shattering News:*

**SSC Ultimate Aero Twin Turbo Runs 255.83 Miles Per Hour  
to Break Production Car World Speed Record**

The Ultimate Aero posted a top speed of 257.11 mph (413.83 kph) on its first pass and 254.55 mph (409.71 kph) on its return pass, yielding a new top speed record: a staggering 255.83 mph (411.76 kph). The data, collected by Dewetron's world-renowned GPS tracking system, will be verified by Guinness before the Ultimate Aero is officially crowned the "World's Fastest Production Car."

Top Marques Monaco would like to welcome aboard a new sponsor, who specializes in luxury private yacht charters throughout the world. With headquarters in Beverly Hills, there is no wonder that their clients are raving about super-star service!
